

Whereabouts of key personnel and priced items at your fingertips

ON ENTRY:

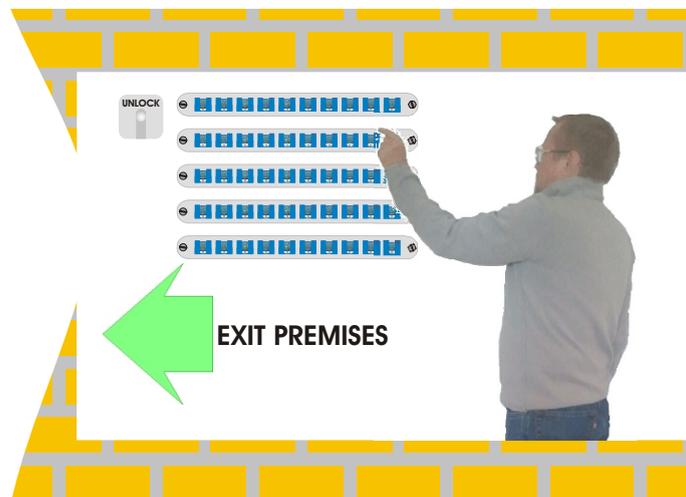

The biometric scanner, turns on a red LED by the tag allocated to the owner of the fingerprints. Simultaneously the lock is released and the employee can remove his ID tag. From this point on his whereabouts on the premises are known. Hence appropriate access control can be applied to employees while on premises.

Red light indicates unlock status, the tag can be pulled from the rack

ON EXIT:

Employees return the tags to the rack for recharging. Tags can be locked in the rack until released by a biometric scan. Racks can be wired to unlock the exit door, when a tag is returned.
